

MOTOROLA SOLUTIONS VT100 BODY-WORN INCIDENT RECORDER

MOBILE CAMERA INTEGRATION FOR LIVE, FIRST-PERSON RECORDING

Staff in public-facing roles who don't feel safe at work leave the company, utilize employer healthcare services at a higher rate, or bring insurance and legal claims against the employer when a safety incident occurs. Employers who provide body-worn cameras as part of an employee health, safety and accountability program can find success in reducing threats to security and safety in the workplace and their negative impact on business and customers.

Motorola Solutions VT100 body-worn incident recorders are designed to enrich your current video security program by providing live, first-person perspective video and audio from confrontational incidents between staff members and the public.

When implemented alongside fixed-video deployments and integrated with Avigilon Control Center (ACC) software, activation of a body-worn camera recording generates a motion start event in ACC™ software and displays the camera's live video feed to the system operator alongside video feeds from fixed cameras, allowing security personnel to gain complete situational awareness and respond accordingly.

PROTECTS STAFF

Staff in public-facing roles feel safer and more protected knowing a security staff member will have eyes on the scene anytime the camera record button is pushed.

HELPS DETER AGGRESSION

Improves how staff and the public conduct themselves during conflict, reducing the likelihood of incidents escalating to assaults.

ENHANCES FIXED-VIDEO SECURITY

Provides complementary audio and video capture of incidents when integrated with ACC software and utilized as part of a larger security function.

DISCREET & UNOBTRUSIVE

Lightweight, unobtrusive cameras are easily assigned to staff and attached to uniforms like ID badges.

HIGH-QUALITY VIDEO

Captures evidential-quality footage for viewing by security staff and sharing with prosecution when required.

LONG-LASTING & EASY TO USE

Six-month stand-by battery life means staff don't need to worry about charging the device often, and no training is required to operate.
