

MOBILE VIDEO SOLUTIONS

SITUATIONAL AWARENESS FOR ENHANCED SAFETY & OPTIMIZED RESPONSE

BODY-WORN VIDEO

FOR PUBLIC SAFETY

EVIDENCE LIBRARY VIDEO MANAGEMENT SOFTWARE

The industry standard for evidence management, Evidence Library offers an incredibly versatile platform, with cloud, on-premise and options for managing, storing and sharing evidence. Evidence Library automatically links video and audio captured by WatchGuard mobile video devices, and then synchronizes playback so recorded video and audio from multiple devices can be seen and heard simultaneously.

RECORD-AFTER-THE-FACT

Never miss an incident with our patented Record-After-the-Fact® (RATF) technology. You have the power to go back in time and record an event, even when the officer didn't press record.

CLOUD-SHARE

Stop burning DVDs to share evidence. Because of cloud technology, you can distribute and share digital evidence simply.

WATCH COMMANDER

Want complete situational awareness for your command staff? This live-streaming software lets you see and hear what's happening as a situation unfolds.

SMARTCONTROL

Manage V300 features, view and categorize recorded events, or stream live video using a WiFi-enabled mobile device.

REDACTIVE

Our simple-to-use yet extraordinarily powerful redaction software quickly scans the entire video clip first, automatically detecting faces, people, vehicles, and license plates, so the user spends less time manually performing the task.

WATCHGUARD V300

The WatchGuard V300 continuous-operation body camera is the first in the industry to address law enforcement's need for cameras that remain operational beyond a 12-hour shift.

DETACHABLE BATTERY

Easily change the V300's rechargeable battery while on the go. Officers can keep an extra battery at the ready for unexpectedly long shifts, extra shifts or part-time jobs where a body camera is required.

AUTOMATIC WIRELESS UPLOADING

Send critical video back to headquarters while still in the field. The V300 uploads to cloud-based or on-premise evidence management systems via wireless networks like LTE and FirstNet, anytime, anywhere.

ABSOLUTE ENCRYPTION

Elevate your data security with encryption at-rest and in-transit technology. CJIS-compliant V300 guards your data and your reputation.

INTEGRATED WITH IN-CAR SYSTEM

One or more V300 cameras and a 4RE in-car system can work seamlessly as a single system, capturing synchronized video of an incident from multiple vantage points.

NATURAL FIELD OF VIEW

Reduce the fisheye effect from wide-angle lenses that warps video footage. Our distortion correction technology provides a clear and complete evidence review process.

IN-VEHICLE VIDEO

FOR PUBLIC SAFETY

4RE IN-CAR VIDEO SYSTEM

The most deployed in-car video system within U.S. law enforcement. The 4RE in-car system is ultra-rugged and highly extensible, helping protect agencies' investment well after initial deployment. The system integrates seamlessly with body-worn cameras, automatically uploads recorded events over wireless networks like LTE and FirstNet, and uses high-definition cameras to detect license plates on vehicles during traffic stops.

4RE RUGGED IN-CAR RECORDER

Ensuring you never lose a recording means having a back-up plan that ensures you don't. The 4RE's dual drive architecture automatically writes active recordings to both an internal Solid State Hard Drive (SSHD) and removable USB Flash Drive, providing the perfect back-up plan. The USB is fully secured behind a locking cast zinc door and can be removed for secure manual transfer.

4REM MOTORCYCLE VIDEO SYSTEM

The industry-leading features of the 4RE® in-car system integrated with a weatherproof camera designed to withstand the harsh environments experienced by motorcycle fleets.

PANORAMIC X2 CAMERA

Dramatically expands 4RE's video coverage in front of the patrol car by combining the stunning quality of the ZSL with an HD panoramic camera, all in one compact, rugged housing. Now, you can get full coverage without losing any of the details.

ZERO SIGHTLINE (ZSL) CAMERA

Specifically designed to be mounted in front of the rearview mirror in order to ensure there is zero obstruction of the officer's line of sight. The all-digital ZSL camera utilizes a cast zinc camera body with a unique form factor that is about the size of a credit card.

HD MINI ZOOM CAMERA

12x optical zoom camera with direct controls for automatic or manual zoom and focus allow officers the ability to see license plates from nearly 40 feet away and pick up key details of a person or object from a distant position.

INFRARED CABIN CAMERA

Specifically designed to monitor backseat activity, the Infrared Cabin Camera has a rugged design and low profile that anticipates any law enforcement arrest. The infrared sensors mean that no matter how low the light is, security footage is captured.

SIDE OR REAR-FACING CAMERAS

Obtain a 360-degree view around the patrol vehicle by adding side and rear-facing cameras to a forward-facing camera system.

INTERVIEW ROOM SOLUTIONS

4RE INTERVIEW ROOM SYSTEM

Interview suspects with confidence, knowing critical confessions and statements will never be missed using the trusted security of 4RE and RATF technology. Our interview room recording system can conveniently package all your interview room video and audio with all other digital evidence in searchable case files.

LIVE REMOTE VIEWING

Live video streaming software provides remote viewing for investigators, command staff and attorneys through a networked connection.

LIGHTED EASY-ON WALL SWITCH

Provides quick and easy start and stop of recordings from the interview room.

EVIDENCE LIBRARY INTEGRATION

Video and audio are transferred via ethernet to Evidence Library, where they can be stored independently as part of case files along with other digital files including video events from 4RE in-car and motorcycle video systems.

COVERT AND TRADITIONAL CAMERAS

Traditional dome security camera, covert motion sensor hidden camera and covert pinhole camera.
